Summary

Computer Science with Artificial Intelligence student building practical React and JavaScript software for local-business workflows plus defensive, local-first AI, data, cloud, and cybersecurity prototypes. Delivered two working flagship products and a 30-project Applied Labs catalog supported by 142 lab-focused tests; the full repository suite passes 151 tests. Seeking software engineering internships and startup-project opportunities.

Skills

- Languages: Python, JavaScript, C, HTML, CSS; TypeScript basics
- Applications and data: React, Vite, responsive UI, dashboards, JSON/CSV validation, data analysis, local-first workflows, PDF/DOCX generation
- Engineering: Git, GitHub, automated testing, CI workflows, defensive input validation, REST API basics, Supabase/PostgreSQL basics, cloud/networking fundamentals, technical documentation, AI-assisted development with manual verification

Credentials

- 30 completed credentials across machine learning, generative AI, cloud, networking, programming, data analysis, business, and cybersecurity; certificate archive and working prototypes are linked from the portfolio.

Projects

Printing Press ERP | React, TypeScript/JavaScript, Vite, Supabase-compatible architecture

- Repaired and deployed a synthetic public demo with owner dashboards, browser-local order/production workflows, persistence, route navigation, and production-priority updates while isolating live client data and authentication.
- Verified runtime/store behavior, dashboard routes, SPA deep links, lint, production build, persistence, and a Cloudflare Workers deployment.

Timber CFT Pro with Billing | React, JavaScript, Vite

- Converted supplied timber rules into browser-local CFT, ICBM, and raw-millimetre M3 calculations with CFT/M3 pricing, discount, GST, payments, balance/change, strict validation, local history, reopen, and print/Save PDF.
- Excluded imported client database files and verified preserved measurement and invoice rules with automated tests.

Applied Labs | React, JavaScript, Python/C artifact generation

- Built 30 certificate-connected prototypes across five categories. Selected evidence includes CSV Claim Stress Tester, Detection Contract Drift Guard, Feature Misuse Contract, and Share-Link Afterlife Rehearsal; the full repository suite passes 151 automated tests.

Education

B.Sc. Computer Science with Artificial Intelligence, Rathinam Global University, Coimbatore - Expected 2028 | Semester 3 | CGPA 8.0

- Relevant coursework: Artificial Intelligence, Programming, Data Structures, Web Development, Database Systems
