

Deepan Karthick

Practical software for real business decisions

deepankarthick212@gmail.com | 9487572163 | Coimbatore, Tamil Nadu, India | GitHub: <https://github.com/darkraigamer212-cmd> | LinkedIn: <https://www.linkedin.com/in/deepan-karthick-166735374/> | Portfolio: <https://deepan-karthick-portfolio.industrious-keyboard.workers.dev/>

Profile

B.Sc. Computer Science with AI student turning unclear, manual work into small, reviewable software. Current proof: two working business products plus 30 certificate-connected prototypes. I use AI to accelerate planning and debugging while keeping rules, claims, tests, privacy boundaries, and documentation manually reviewable.

What I Build

- React dashboards and internal tools; local-business workflow software; Python/JavaScript automation; data validation; defensive security planning tools; PDF/DOCX output; tested AI-assisted prototypes.

Best Proof

01 / Printing Press ERP | React, TypeScript/JavaScript, Vite, Cloudflare

- Deployed a synthetic business-workflow demo with owner dashboards, local order/production workflows, persistence, route verification, and an explicit boundary from live client data and authentication.

02 / Timber CFT Pro with Billing | React, JavaScript, deterministic domain modules

- Preserved supplied timber measurement rules and added pricing, discount, GST, payments, balance/change, strict validation, local history, reopen, and print/Save PDF without shipping the imported client database.

30 / Applied Labs | Five categories, 142 lab-focused tests

- Each certificate maps to a working prototype with a named user, practical problem, inspectable decision logic, reusable output, tests, safety boundaries, and limitations. Selected labs generate claim evidence, regression harnesses, acceptance contracts, and rollback plans.

Skills

React, JavaScript, Python, C, HTML, CSS, Vite, Git/GitHub, automated testing, responsive UI, dashboards, business workflows, data validation, defensive security tooling, cloud/networking fundamentals, Supabase/PostgreSQL basics, PDF/DOCX generation, technical documentation, and AI-assisted engineering with manual verification

Learning Evidence

- Completed 30 credentials across machine learning, generative AI, cloud, networking, programming, data analysis, business, and cybersecurity; each is represented by a working Applied Lab.

Education

B.Sc. Computer Science with Artificial Intelligence, Rathinam Global University, Coimbatore - Expected 2028 | Semester 3 | CGPA 8.0
